

Nirvana GDS

HAIR REMOVAL EQUIPMENT FOR ALL SKIN TYPES EVEN DARKER TONES.

Diode Laser Nirvana GDS is a new and exclusive device for permanent hair removal manufactured entirely in Europe.

It manages the energy in a unique way, always ensuring the same power in each shot, even during the sessions with **"Motion"** mode.

Our new sweeping system emits laser light continuously covering the area to be treated. It distributes the energy in a homogeneous way. **Nirvana GDS** is equipped with two working modes: **Standard**, with a shot-by-shot at low frequency; and **Motion**, multi-shot mode made at a high frequency in the same area, making it painless, fast and effective.

Diode Laser Nirvana GDS obtains a successful hair removal treatment on all skin phototypes, even tanned ones. And it can be used all year round.

Our diode laser allows the permanent removal of hair without damaging the surrounding tissues, since it is based on selective photothermolysis, which focuses the laser emission to the hair and not to the skin.

CHARACTERISTICS

- ✓ 100% manufactured in Europe
- ✓ State-of-the-art technology
- ✓ Effectiveness, profitability and power
- ✓ Designed with your safety in mind
- ✓ Intuitive and easy-to-use touch screen (12")
- ✓ Modifiable pre-set parameters

2 WORKING MODES

STANDARD

Shot-by-Shot 1 - 4 Hz

MOTION

Motion 5 - 10 Hz

Technical Characteristics:

Diode Laser Power: 1200 W
 Wavelength: 810 nm
 Pulse/Shot Duration: 10-100ms
 Fluence: 5-40 J/cm²
 Applicator surface: Spot 10 x 10 mm
 Multi-voltage: 100-240 V / 50-60 Hz
 15 Million Shots

Physical Characteristics

Dimensions: 380x520x1120 mm
 Weight: 28 Kg

COSMETICS

SMART GEL 500ML

High density conductive gel for diode laser.

SWEETY CARE CREAM 500 ML

Hydrating, regenerating and calming cream.
indicated for Pre-laser and Post-laser treatments.
